#### 4. Course general Description:

In a rapidly changing world, the need for online publishers to keep up with the needs and expectations of their site visitors is paramount. Today, many web publishers use content management systems (CMS) to allow them to instantly and dynamically update web pages and properties as new content becomes available so that every visit to a site is engaging, informative, and meaningful. This course explores the use of the three most popular open-source web-based content management systems—WordPress, Joomla, and Drupal—to create dynamic and flexible websites and landing pages. Participants explore the fundamentals of planning dynamic websites, CMS database management, developing CSS-controlled site templates, and creating database-driven websites through the planning and creation of their own topic-based sites.

#### 5. Pre-requirements for this course (if any): 1301CIS

#### 6. Co- requirements for this course (if any):

#### 7. Course Main Objective(s):

The goal of a CMS is to provide an intuitive user interface for building and modifying webpage content. There are some specific reasons for you can use CMS for your website.

- If you can send an e-mail, use Microsoft Word or set up a Facebook account, then you can use a CMS.
- With a CMS you enter the Do-It-Yourself world.
- Most CMS software is online and offers multiple users, which means you're not the only one who can fix something in a pinch, and you can access it from anywhere.

Most CMS software also makes it easier to optimize your search engine results.
